Contents

1	Work	2
2	Read the book	2
3	VPS in USA	2
4	My plan	2

1 Work

1. Reading the elegant book " How to write mathematics ..."
2. Renting a new virtual server in USA and trying to use it to run my program.
3. Learning how to use GPU to speed up my program.
4. Having a long talk with my family about my plan next year.

2 Read the book

I have read a half of the book, but it's very hard to memorize the English texts. (Every day, I just spend the night reading one page. Maybe it's not the good time for reading.)

3 VPS in USA

Because building the neural network takes a large number of workloads, so I have tried to use my VPS to finish this work. But actually, the VPS I rent works slower than my computer.

4 My plan

Based on the current situation, my father thinks that I can't squeeze more time to prepare the new big exam for the other university especially preparing the different field of study. He said that I should be reality, the most important thing is what I can do not what I have learned. Maybe I could try something during the study.

So I'm preparing the interview for the practice of " Alibaba" this summer for operation and management, but I'm not sure whether it works.
